PROPAGATION AND DISTRIBUTION OF FISH FROM NATIONAL FISH HATCHERIES FOR FISCAL YEAR 1973

Prepared by the Division of Fish Hatcheries

This report on fishes and fish eggs distributed by national fish hatcheries for the period July 1, 1972, to June 30, 1973, is a continuation of a series of publications issued since 1872. Records of hatchery outputs were published in annual reports of the U.S. Commission of Fish and Fisheries through 1903 and in annual report appendixes of the Bureau of Fisheries of the Department of Commerce until 1940. From 1941 through 1962, these tabulations were presented as "Statistical Digests." Beginning in 1963 these reports became known as the "Fish Distribution Report." Report number 2 for 1965 and 1966 established the fiscal year as the period of coverage.

The National Fish Hatchery System produces primarily salmon, trout, catfish, pike, bass, and sunfish. Several additional species of fish are produced or collected for use as test animals in various research projects.

The goal of the Bureau of Sport Fisheries and Wildlife is to assist in meeting the public demand for recreational fishing while maintaining the Nation's fishes and their habitats at a level and in a condition that will assure their continued survival. Distribution of fish from the Federal hatchery system assists in meeting this goal in accordance with the following objectives:

a. To maintain existing sport fishery populations at the level required to meet public demand to the maximum extent feasible.

b. To increase fishing opportunities by restoring destroyed or depleted fisheries.

c. To create greater fishing opportunities by upgrading existing fish populations, developing fisheries in new waters and introducing new species.

d. To protect the Nation's fisheries by limiting the introduction or distribution of diseased fish and their attendant pathogens.

e. To control the distribution and population levels of exotic species.

f. To carry out responsibilities established by treaties and other commitments of the Federal Gov-

ernment to maintain or restore fish resources.

It is the policy of the Bureau of Sport Fisheries and Wildlife to allocate or distribute the output of its fish hatcheries in the following order of priority:

a. The primary obligation is in the stocking of waters on lands under the control of the Federal Government, including national parks, national monuments, national forests, Indian reservations, Bureau of Reclamation reservoirs, areas under the control of the Tennessee Valley Authority, areas under the control of the Bureau of Land Management, wildlife refuges administered by the Bureau of Sport Fisheries and Wildlife, and areas directly controlled by Federal agencies including those where Federal water-use projects have affected fish populations. For the purpose of this policy, ponds and reservoirs constructed on private lands with the aid and encouragement, either financial or otherwise, of the Federal Government will be included in the foregoing category.

b. The secondary obligation is to stock State waters, including the lakes, streams, ponds, etc., which are open to public fishing. This stocking will be carried on either by direct plants under the supervision of the Bureau of Sport Fisheries and Wildlife by arrangement with State conservation departments, or by furnishing fish in response to applications from organizations or individuals.

c. After apportioning fish to meet the above obligations, the remainder are scheduled by application for stocking in private waters. The term private waters is to be construed as meaning lakes, ponds, or streams which are not necessarily open to the general public but which are not commercialized.

The present system for allocating fish to the several classes of water has been used by the Federal Government since 1949. The records system used to report stocking of fish was completely revised as of January 1, 1966, to provide more current data and better identification of the various program areas. As a result of the development of fishery management programs, long-range stocking requirements have been determined in many States and Federal areas. It is no longer necessary or desirable to receive individual requests for stocking of public waters. The system of allocating fish on the basis of individual applications, Form 3-1688, is effective as a means of informing the Bureau of Sport Fisheries and Wildlife of newly created small waters such as farm ponds, built primarily with technical and financial assistance from the Department of Agriculture.
